Why BRIK&PEARL

Developed through decades of formulation expertise, global education and real world experience, it brings together many of the advancements we have learned along the way into one intelligent, versatile system.

Transform

Restructure
& lift

Stabilise

Lock in shape
& strength

Reinforce

Support, condition &
enhance

Meet the BRIK&PEARL System

1

bond flex

Bond Flex is the transformative step of the Brik & Pearl system. Using advanced hybrid chemistry, it gently restructures the hair's disulfide bonds to create lift, shape and direction while offering the flexibility to customise processing for different lash types. Enriched with Kera Veg 18, it also helps support the cosmetic condition of the lashes throughout the lifting process.

2

bond lock

Bond Lock is the stabilising step that helps secure and set the newly created lift. Working in harmony with Bond Flex, it assists in reforming the bond structure, restoring balance to the hair fibre and promoting consistent, reliable results across a wide range of lash types.

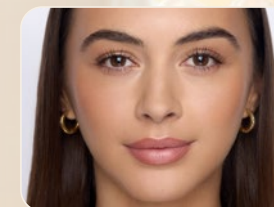

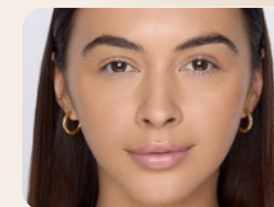

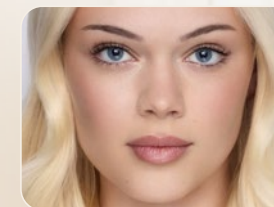

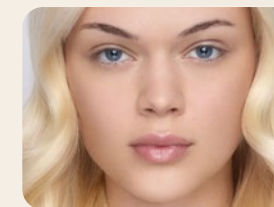

3

lash life volume filler

Volume Filler is a multifunctional treatment designed to provide hydration, conditioning and support wherever the lashes need it most. Rich in hyaluronic acid, panthenol, peptides and conditioning actives, it can be used throughout the service journey to help improve the appearance, feel and cosmetic condition of the lashes while enhancing overall results.

Before BRIK&PEARL After

BRIK&PEARL Benefits

- Hybrid Formula
- Infused with Kera Veg -18
- Promotes strengthening during chemical process
 - Fast processing
 - Vegan friendly
 - Made in Italy
- Plant extracts and amino acids
 - Strength meets softness
 - Innovation in lamination
